Introduction to plants. Plants are an incredibly important kingdom of organisms. They are multicellular organisms with the amazing ability to make their own food from carbon dioxide in the atmosphere. They provide the foundation of many food webs and animal life would not exist if plants were not around. The study of plants is known as botany and in this introduction to plants we look at key ...

### Introduction to Plants | Basic Biology

Unlike animals, plants are capable of indeterminate growth –growth throughout the life of the plant. This unlimited growth potential is due to meristem tissue –a special, undifferentiated tissue with unlimited replicative potential. • in contrast, animals and some plant structures (e.g., flowers, thorns) exhibit determinate growth in which

Introduction to Plants. Plants are multicellular eukaryotic organisms with the ability to produce their own food by the process of photosynthesis. (They are autotrophs.) Algae have historically been included with the plants, but they are now classified with the protists.

### Introduction to Plants - CliffsNotes

The xylem of vascular plants consists of dead cells placed end to end that form tunnels through which water and minerals move upward from the roots (where they are taken in) to the rest of the plant. Phloem, which is made up of living cells, carries the products of photosynthesis (organic nutrients) from the leaves to the other parts.

### Plants: Essential Processes: Water Transport | SparkNotes

Sugars, which are formed by the plant during photosynthesis, are an essential component of plant nutrition. Like water, sugar (usually in the form of sucrose, though glucose is the original photosynthetic product) is carried throughout the parts of the plant by the vascular system. Phloem, the ...

### Plants: Essential Processes: Sugar Transport | SparkNotes

Biology is subdivided into separate branches for convenience of study, though all the subdivisions are interrelated by basic principles. Thus, while it is custom to separate the study of plants from that of animals (), and the study of the structure of organisms from that of function (), all living things share in common certain biological phenomena—for example, various means of reproduction ...
