3.5 Enclosure Maintenance. "Properly designed and maintained enclosures are essentials to the managing of the animals. Everything should provide a safe environment for staff and visitors and also ensure that housing and husbandry stimulate the animals both physically and psychologically. Housing and husbandry should also enable the keepers to maintain and promote good animal welfare."

Server Maintenance. Server Maintenance is the process of keeping the server updated and running to ensure that the organization's computer network is operating smoothly. The network administrator usually does this, and it is crucial to the performance of the business. Without a proper IT service plan, the application software will never run as expected.

What is a server maintenance plan and why is it important ...

Figure 42 Installing the Server Blade into the Enclosure NOTE: After you install the server blade back into the enclosure, the server blade might go to standby power (Internal health LED is amber), or full power (internal health LED is green, and the fans may get louder).
