### Photography 101: Exposure, Aperture, Shutter Speed, and ...

CAMERA EXPOSURE A photograph's exposure determines how light or dark an image will appear when it's been captured by your camera. Believe it or not, this is determined by just three camera settings: aperture, ISO and shutter speed (the "exposure triangle"). Mastering their use is an essential part of developing an intuition for photography.

### Camera Exposure: Aperture, ISO & Shutter Speed

Set up your camera on the tripod and check your exposure. If your shutter speed is long enough, which might be the case if you are shooting at night, you are all set. If you need to slow down your shutter speed, you need to make offsetting changes to your ISO and Aperture. First put the ISO as low as possible.

### Mastering Shutter Speed - Outdoor Photo Academy

Just bump the ISO up, and it will allow you to have a faster shutter speed, or a smaller aperture (bigger number) and still accept the light conditions to expose correctly. Or, if you're taking pictures at a sporting event , and you want to make sure you catch that action, but the light isn't great, bump the ISO up.

### Mastering the Exposure Triangle for Newbies

In our previous installment, "Understanding Aperture: Controlling Light Based on the Exposure Triangle," we took an in-depth look at a variety of different ways that proper light exposure can be achieved by adjusting the camera's aperture. This time, let's consider some examples of how this balance can be achieved in relation to shutter ...
